Conformable

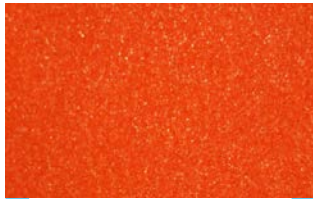

Whilst surfaces like Durbar plate, chequer plate and diamond tread appear to be slip resistant, they can be quite the opposite.

Additionally, the uneven surface makes adhesion difficult for most tapes as they 'lift' in an attempt to retain their flat shape.

Conformable tape has no "memory" and so once it is pressed into place on uneven surfaces it remains in that shape and resists lifting.

SAFETY-GRIP®

Photoluminescent - (Glow in the Dark)

Photoluminescent tape charges by absorbing artificial or natural light (approx. 2 hours). Once charged, photoluminescent tapes glow - even in complete darkness.

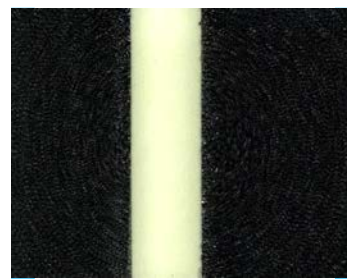

The glow in the dark materials used to manufacture our products are non-toxic, and free from any phosphorous or radioactive material. Photoluminescent tape is available in H3452 - Premium and H3454 - Super, these are DIN67510, OSHA 1910 and ASTM2072 approved anti slip tapes.
